Operating Temperature	0° to 160°F (-17° to 71°C)				
Vibration	up to 10g to 2000 Hz maximum				

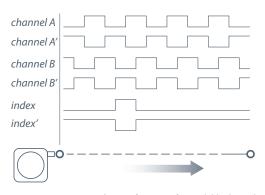

With its incremental optical encoder and industrial design, this rugged transducer provides the highest accuracy and longest life of any measurement device of its kind. For measurements up to 60 inches, this model is available in a variety of resolutions and output stages to fit virtually any requirement.

The PT8150 offers numerous advantages over other industrial-grade sensors: It installs in minutes by mounting its body to a fixed surface and attaching it's cable to the movable object, fits into areas unsuited for rod-type measurement devices, and works without perfect parallel alignment.

\* –applies to stainless steel enclosure only.

## **Cable Guide Options:**

\*important! – bellows limits measuring cable travel to 25 inches, contact factory before ordering.

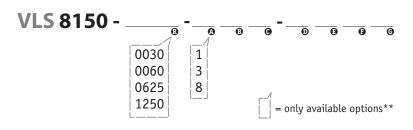

# **VLS Option** - Free Release Protection

The patented Celesco Velocity Limiting System (VLS) is an option for PT8000 Series cable extension transducers that limits cable retraction to a safe 40 to 55 inches per second.

The VLS option prevents the measuring cable from ever reaching a damaging velocity during an accidental free release. This option is ideal for mobile applications that require frequent cable disconnection and reconnection. It prevents expensive unscheduled downtime due to accidental cable mishandling or attachment failure.

VLS is NOT available for medium and high cable tension options or 2, 5 and 15-inch stroke ranges.

How To Configure Model Number for VLS Option:

creating VLS model number (example):

1. select PT8150 model

PT8150-0060-111-1110

2. remove "PT" from the model number

**8150-0060-111-1110** 

3. add "VLS"

VLS + 8150-0060-111-1110

4. completed model number!
